DETAILED ACTION

Election/Restrictions

Restriction to one of the following inventions is required under 35 U.S.C. 121:

- I. Claims 1-25, drawn to a composition, classified in class 435, subclass 183.
- II. Claims 26-39, drawn to a first kit, classified in class 514, subclass various.
- III. Claims 40-51, drawn to a second kit, classified in class 424, subclass various.
- IV. Claims 52-65, drawn to a first method of treating an injury in an animal, classified in class 435, subclass various.
- V. Claims 66-77, drawn to a second method of treating an injury in an animal, classified in class 530, subclass various.

The inventions are distinct, each from the other because of the following reasons:

Art Unit: 1654

The inventions are each restrictable from one another since the kits comprise different components which are materially distinct from one another. The composition can be used in different kits and at different times in the claimed processes. The methods perform steps in different ways which makes them materially distinct from one another since different steps are involved in them. The composition can be used in a materially distinct process such as treating cancer.

Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, restriction for examination purposes as indicated is proper.

Because these inventions are distinct for the reasons given above and have acquired a separate status in the art because of their recognized divergent subject matter, restriction for examination purposes as indicated is proper.

This application contains claims directed to the following patentably distinct species of the claimed invention: the many different components in the composition. Applicant is required to enumerate all of the specific components (i.e. specific enzyme: i.e. trypsin and specific type of growth factor) in the composition to be used in a kit, in a process or the composition in and of itself.

Applicant is required under 35 U.S.C. 121 to elect a single disclosed species for prosecution on the merits to which the claims shall be restricted if no generic claim is finally held to be allowable. Currently, claims 1, 13, 26, 40, 52, 66 are generic.

Applicant is advised that a reply to this requirement must include an identification of the species that is elected consonant with this requirement, and a listing of all claims readable thereon, including any claims subsequently added. An argument that a claim is allowable or that all claims are generic is considered nonresponsive unless accompanied by an election.

Upon the allowance of a generic claim, applicant will be entitled to consideration of claims to additional species which are written in dependent form or otherwise include all the limitations of an allowed generic claim as provided by 37 CFR 1.141. If claims are added after the election, applicant must indicate which are readable upon the elected species. MPEP § 809.02(a).

Should applicant traverse on the ground that the species are not patentably distinct, applicant should submit evidence or identify such evidence now of record showing the species to be obvious variants or clearly admit on the record that this is the case. In either instance, if the examiner finds one of the inventions unpatentable over the prior art, the evidence or admission may be used in a rejection under 35 U.S.C. 103(a) of the other invention.

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).

Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim

Art Unit: 1654

remaining in the application. Any amendment of inventorship must be accompanied by a request under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).
